## PROJECTS UNDERTAKEN

---

### Dicer (JavaScript) - [Two players game]

- This game is played between two players. Each time a player will throws the dice and points will be added to one's score after the player chooses to hold that score
- If the current player gets 'one' on his dice, the dice will be given to other player, Also his scores will go to 0 (if not held)
- At last, whoever crosses a total of score hundred will be declared as the winner

### Personal Portfolio - [HTML,CSS,Javascript] – [www.manavs.com](http://www.manavs.com)

- The portfolio is responsive and built to showcase my projects that I work on
- Its hosted on github right now, earlier a shared hosting was used to host the portfolio

### ATM Machine (Java) – [Built using NetBeans]

- This project has a feature of registering a new account or using the account if a user already has one
- The user has the ability to deposit funds which will update the balance of the user
- The user can withdraw funds and changes will be reflected on the balance
- An option of mini statement is also provided to show previous deposits and withdrawals
- Connectivity of database is done at the backend to store any changes that take place
